

# Ceiling Mounting 1x

## Shapely and light

The new FELA ceiling mounting of one TFT was developed for use in rail vehicles in public transport.

It is used to hold a TFT monitor with a front frame. It is mounted in rail vehicles on horizontal surfaces or on the ceiling of the vehicle. The monitor's inclination enables a reflection-free view of the display.

The mounting, together with the TFT monitor, allows passengers an unobstructed view of information about the further course of the journey:

- the current location
- the further course of the journey with a way station display
- the time of arrival
- connections if needed

## For 18.5 and 21.5 inches

- Aluminium frame, welded
- Powder coating with anti-graffiti properties
- Can be used flexibly
- Easy assembly, installation and light weight
- Colour choice according to customer requirements (RAL, NCS)
- Customised solutions for simplified assembly in refit projects
- Renewal of existing vehicles
